

## HairMax Laser Comb Receives FDA Clearance for Hair Regrowth

By Catalina Kelly - Mar 21, 2007

HairMax Laser Comb is the World's First at Home Device to Receive FDA Clearance to Regrow Hair

After years of stringent testing, data and research The FDA has approved the Hairmax Laser Comb® for the promotion of hair growth giving this product the distinction of being the world's first ever at home device to make this claim with regard to hair regrowth. Until now, the FDA has only approved two other products as solutions to combat hair loss, a condition that affects approximately 55 million men in the U.S. The HairMax Laser Comb® stands out as the only proven drug-free alternative. This affords many hair loss sufferers, previously unable or unwilling to turn to drug-based solutions, newfound hope in their battle against baldness.

For the FDA submission, Lexington conducted an extensive clinical study in four different locations across the United States. The study concluded that 93% of the participants (ages 30-60) using the HairMax LaserComb had an increase in the number of terminal (thick) hairs. The average number of terminal hairs per square centimeter increased by 19 hairs/cm<sup>2</sup> over a six-month period. During the study, there were no reports of serious adverse events. The number and types of adverse events were similar in both the active and placebo groups.

How does this miracle work? Fortunately, treatments using the HairMax LaserComb are easy to administer, only 10 to 15 minutes three times per week, and the laser device is convenient to use in the comfort and privacy of your own home. HairMax has been precision-engineered into a compact device about the size of a curling iron. Just pass it through your hair three times a week for about ten minutes for optimal results. Of course, everybody is unique and results differ among individuals, but anecdotal trials have shown that over 90% of users experience positive benefits and are satisfied with the results they achieve. In general, about 45% of users see noticeable improvements in as little as 8 weeks of treatment. Another 45% realize benefits from 8 to 16 weeks. A small group of users take longer, seeing results around 16 weeks.

Laser technology has been proven successful for over 18 years in professional laser hair clinics. The clinics use a Laser Hood device, costing thousands of dollars and requiring multiple visits to the clinic. That means the clinic may charge you thousands of dollars just for a single course of laser treatment. Worse still, because hair problems are usually chronic requiring ongoing treatment, you may need to continue to pay a small fortune for your hair care program. Not any more: The HairMax Laser Comb retails for \$645.00 and is a good for life purchase!

Dr. Matt Leavitt, Chief Medical Advisor to Lexington, states that, "The HairMax LaserComb is a method of treatment that can be of great help to men of all ages suffering from hair loss. I am impressed with the protocol and results from the clinical trials that Lexington has conducted. With the FDA clearing the HairMax LaserComb as a medical device, it offers an attractive option for hair growth for medical practitioners. We can now deliver a new modality to our patients and achieve strong user satisfaction."

**The launch party was held at famed Manhattan Restaurant/Club Bruno Jamais.**
